

Week 2: Development Tasks

Unit 4: Using Databases

Using Databases

Introduction

Domain Models

Static and data-related aspects of a problem domain in terms of entity-relationship models.

Persistence Models

A set of entities mapped from a domain model and deployed to the database

Services

Exposed interfaces based on the domain model

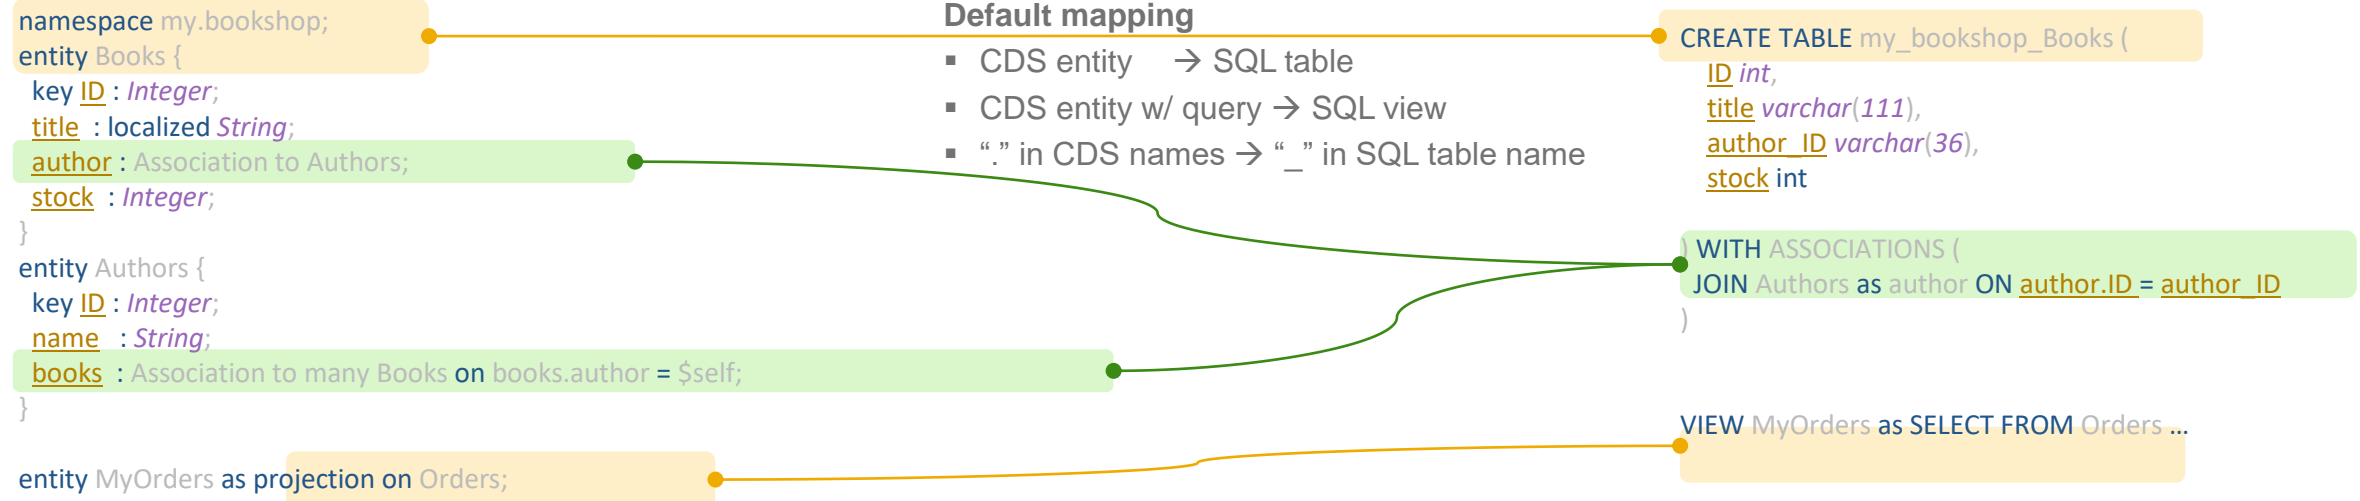

Using Databases

Demo

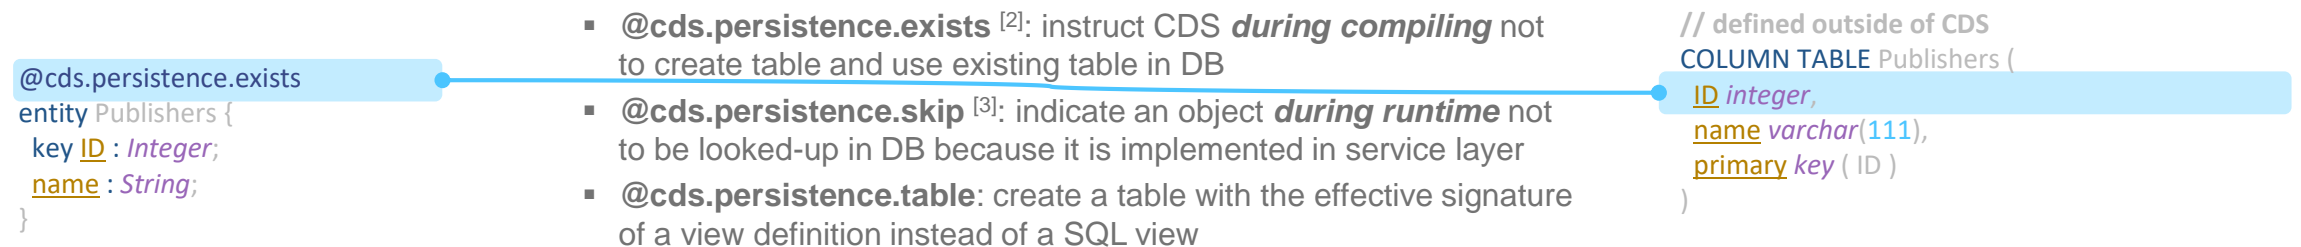

Using Databases

CDS model mapping to SQL ^[1]

Influence mapping through annotations

using API_BUSINESS_PARTNER as bp from '../srv/external...';

```
@cds.persistence.skip
entity A_Customer as projection on bp.A_CustomerType;
```

[1] Demonstrated here with SAP HANA SQL statement. SQLite differs slightly.

[2] Unit 3.5 “Accessing Native SAP HANA Tables and Views” offers further details.

[3] Unit 4.2 “Connecting to Remote Services” offers further details.

Using Databases

Provide initial data

File Location

- db/data
- db/csv

File content

- Header line listing element names

The screenshot displays the SAP Business Application Studio interface. On the left, the 'EXPLORER: PACKAGES' pane shows a project structure with a 'bookstore' folder containing a 'db' subfolder and a 'CSV' subfolder. The 'CSV' subfolder is expanded, showing a list of CSV files. The file 'sap.capire.bookstore-Authors.csv' is selected. The main editor area shows the content of this CSV file, which is a header line followed by five rows of data. The header line is highlighted in green. The data rows are: 101;Emily Brontë;1818-07-30;Thornton, Yorkshire;1848-12-19;Haworth, Yorkshire; 107;Charlotte Brontë;1818-04-21;Thornton, Yorkshire;1855-03-31;Haworth, Yorkshire; 150;Edgar Allen Poe;1809-01-19;Boston, Massachusetts;1849-10-07;Baltimore, Maryland; 170;Richard Carpenter;1929-08-14;King's Lynn, Norfolk;2012-02-26;Hertfordshire, England. The CDS editor shows the schema for the 'Authors' entity, which is managed and extends the 'Books' entity. The schema is highlighted in green.

```
1 ID;name;dateOfBirth;placeOfBirth;dateOfDeath;placeOfDeath
2 101;Emily Brontë;1818-07-30;Thornton, Yorkshire;1848-12-19;Haworth, Yorkshire
3 107;Charlotte Brontë;1818-04-21;Thornton, Yorkshire;1855-03-31;Haworth, Yorkshire
4 150;Edgar Allen Poe;1809-01-19;Boston, Massachusetts;1849-10-07;Baltimore, Maryland
5 170;Richard Carpenter;1929-08-14;King's Lynn, Norfolk;2012-02-26;Hertfordshire, England
```

```
1 namespace sap.capire.bookstore;
2
3 // We reuse Products, which are Books in our domain
4 using { sap.capire.products.Products as Books } from '@sap/cap'
5 using { Currency, managed } from '@sap/cds/common';
6
7 extend Books with {
8   author : Association to Authors;
9 }
10
11 entity Authors : managed {
12   key ID : Integer;
13   name : String(111);
14   dateOfBirth : Date;
15   dateOfDeath : Date;
16   placeOfBirth : String;
17   placeOfDeath : String;
18   books : Association to many Books on books.author = $self;
19 }
```

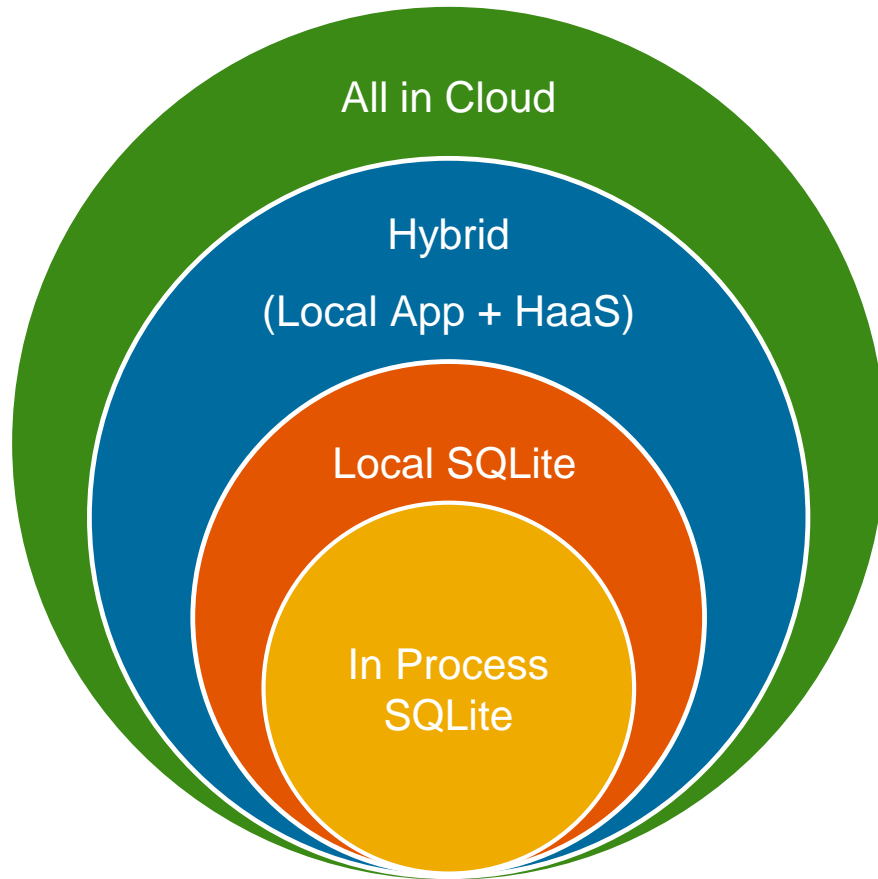

File Naming Convention

- `<namespace>-<entity>.csv`
e.g. `sap.capire.bookstore-Authors.csv`

Import CSV Files

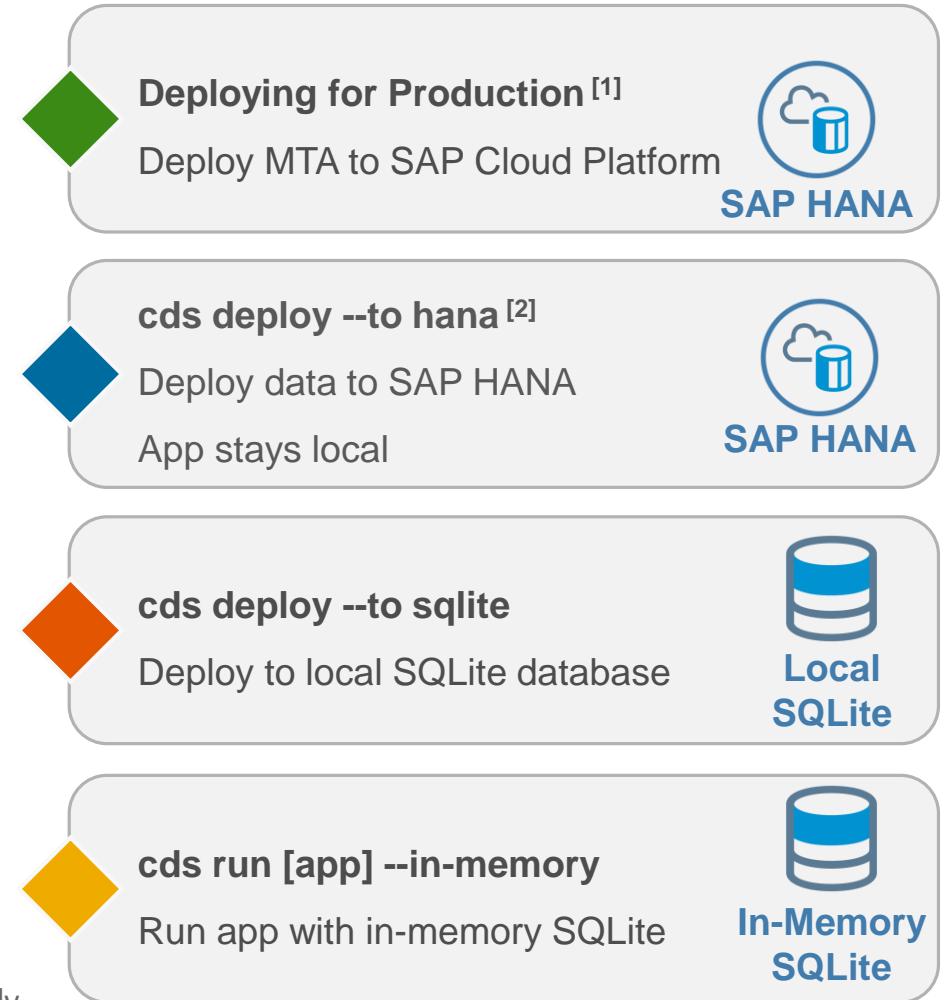

- cds deploy
- SAP HDI Deployer for SAP HANA
- DB tables will be created automatically during deployment

Deploy to database – Grow as you go

[1] Unit 3.4 “Deploying for Production” discusses how to deploy complete project as MTA to SAP CP.

[2] It only deploys database parts to SAP HANA DB on SAP Cloud Platform while the app still runs locally.
To understand what happens behind the scenes, please refer to [deploy --to hana](#).

What you've learned in this unit

- How to grow your database deployment along with your development
- How to deploy only data of your project to SAP HANA service on SAP Cloud Platform
- How to provide initial data for CDS model
- How CDS models get mapped to persistence model

Thank you.
